

## 100% Guarantee

---

**Wasptec offer a 100% guarantee** on all bee, hornet and wasp nest removal treatments undertaken.

*If a wasp control or hornet control treatment is carried out around your property, then the treatment is guaranteed successful.*

---

**If after 48 hours** of treatment there is still activity of either wasps or hornets in and around the area treated then Wasptec will return free of charge.

**If further treatments are required** to eradicate the nest then these will also be carried out free of charge. Please note that 96% of wasp and hornet control treatments are successful first

**Wasptec can't guarantee** you won't get another wasp/hornet nest in & around your home; this guarantee only covers you for the wasp/hornet nest that has been treated by Wasptec. Wasps and hornets emerge from hibernation at different times starting building at irregular intervals. Once a nest has been treated it will not start up elsewhere. If you have wasps/hornets coming & going from a specific point at the front of your house, and the same at the back of your house, this will mean you have at least two nests.

**If Wasptec treat a nest** at the front and are called back and discover the nest is in a different location to where the first treatment was applied then this would be charged at £35 as it would be a completely different nest and would not be covered under the guarantee.

“*Wasptec are wasp nest removal specialists*”

**Wasptec wasp nest removal** will carry out a survey of your property to determine whether more than one wasp/hornet nest is present and if so Wasptec will always point these out to you before any treatments are applied. Wasptec cannot guarantee that extra nests on your property will be found even if they are present. Wasp/hornet activity will vary from nest to nest depending on the size of the colony inside the nest and nests cannot always be detected until significant activity takes place.
